GROWING GREAT SCIENCE MAKING NEW DISCOVERIES BUILDING GREAT MINDS

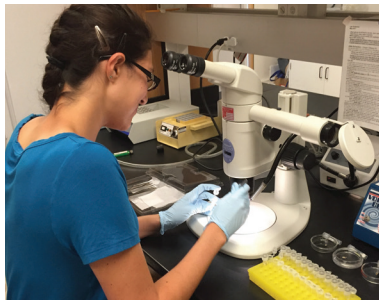

- Entomology is an exciting multidisciplinary science that focuses on insects and their relationship to other organisms, humans, and the environment. Insects impact our health, our food, and our environment.
- Ranked in the top two world-wide, we are one of the world's best entomology programs taught by distinguished faculty conducting pioneering research in the field.
- Ours is the only entomology program to offer a combined undergraduate and research master's degree.
- There are countless opportunities to get involved in research.
- We offer many opportunities to participate in outreach to the community.

DEGREES

- Bachelor of Science (4 years)
- Bachelor of Arts (4 years)
- Master of Science (4+1 years)

The B.S. degree offers students with a strong interest in the natural sciences an opportunity to emphasize this aspect of their education.

A combined B.S. and M.S. (4+1) program is available to motivated students with advanced academic standing. For more information contact Erin Wilson-Rankin (erin.rankin@ucr.edu)

CAREERS

Agricultural sciences, bioinformatics, computational entomology, medical and veterinary sciences, museum sciences, medical sciences, pest and vector control, government agencies, teaching degrees, advanced graduate studies.
